

#1 what is the difference between XM offering weather and traffic in an area, and a new radio station starting to offer traffic and weather in the same location? NONE!

We have turned to satellite radio for many reasons, but the bottom line is that it is just better than broadcast radio, and we are willing to pay to listen.

Also, ask yourself this: is eliminating traffic & weather from XM really what the people want? I'm sure I am not the only one taking the time to write this petition. How many people who do NOT have a financial interest (broadcast) in this are pushing for the removal of this service? answer: NONE Why would the average non-subscriber care what is broadcast over XM?

Please keep XM programming alone.

Thank you for your time.
